Be Bold. Be Creative. Be Inventive. Be Unique.

Do you want to change the world? Minds for Design – Engineering Series challenges you to sharpen your math, science and technology skills as you discover engineering. You will work in groups on various engineering projects ranging from building simple electrical circuits to engineering your own invention. You don't have to be great at science, or know anything about engineering or even be a Girl Scout! Just come to be bold, inventive, creative and awesome!

The Minds for Design – Engineering Series is funded in part by a grant from the United States Department of Education.

Engineer It - Resident Camp Session

Engineer It is a fun filled week where you will learn about the engineering design process, create electrical circuits, conduct engineering experiments and build your own invention. Plus all of the fun of resident camp! You will also get to go behind the scenes at Raging Waters Water Park to see first hand the mechanics of the rides and then have the chance to cool off while enjoying the rides.
